

Island Copper Property

- Island Copper is located north of Sault Ste. Marie in North Western Ontario.
- Several mineralized samples have returned high grade Cu values
- Historic drilling at the Hilltop showing by Kennco Exploration in 1965 returned 3.0m @ 5.22% Cu and 9.5m @ 4.02% Cu.
- Copper mineralization is hosted within a faulted, altered and brecciated granite/ tonalite gneiss (Gros Cap Gneisses).

Potential

- Available for option or partner.
- Ground Geophysics, further ground work, and diamond drilling is recommended to define extent and distribution further.
- Cu remains bullish in future commodities markets as electronics and wires are incorporated into products.
- All claims owned 100% by Transition Metals Corp.

- Gravity anomaly identified by Falconbridge in 2005 underlies the property and has not been explored beyond the historic trenches.

- Photo of the Hilltop Trench which returned high grade samples in 2018.

- Close up photo showing a mineralized hand sample containing massive Chalcopyrite.
